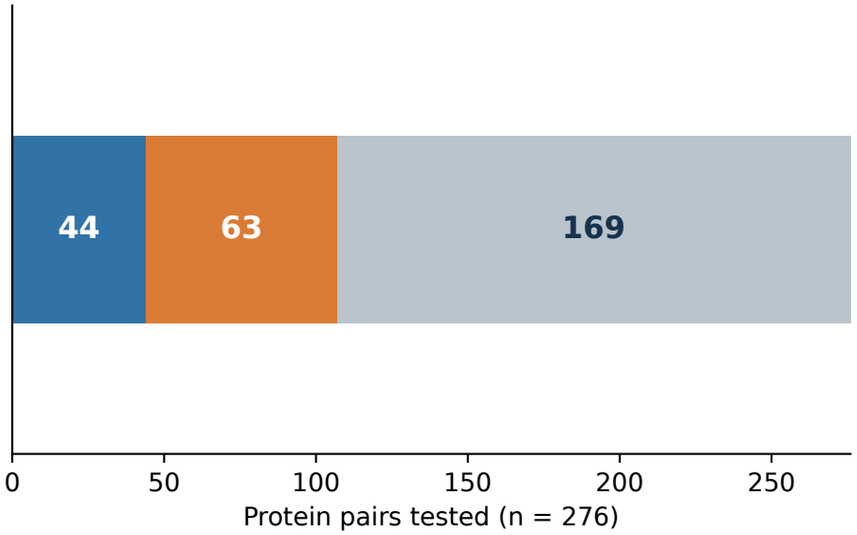
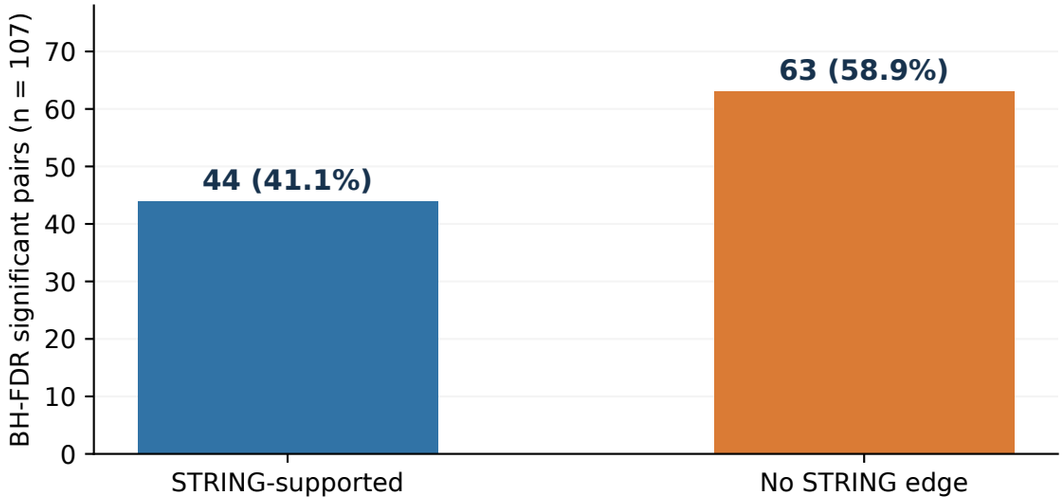
CPTAC protein co-expression and STRING network concordance

Breast cancer proteomics · 24 kinases · 151 samples · Pearson correlations · BH-FDR < 0.05

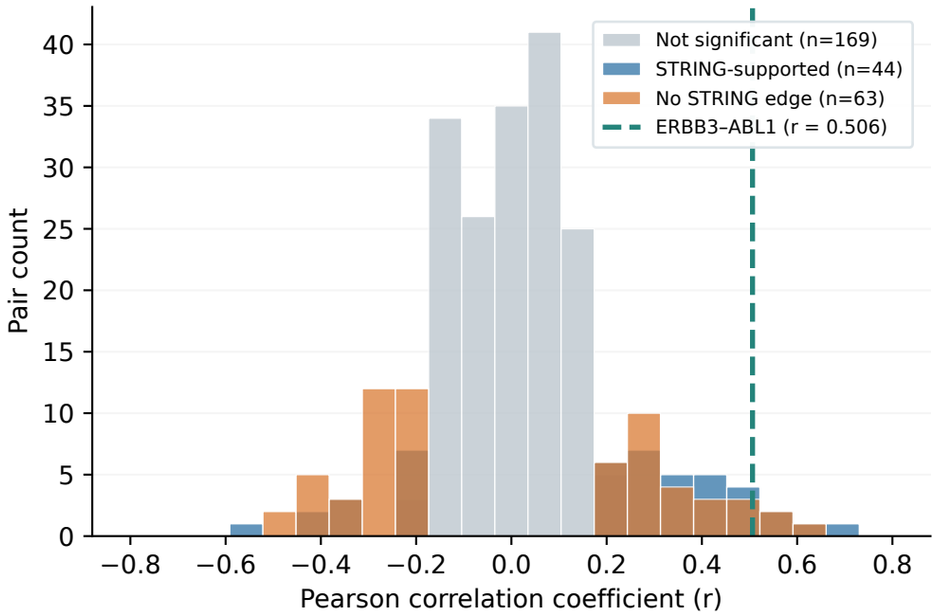
A Statistical testing outcomes



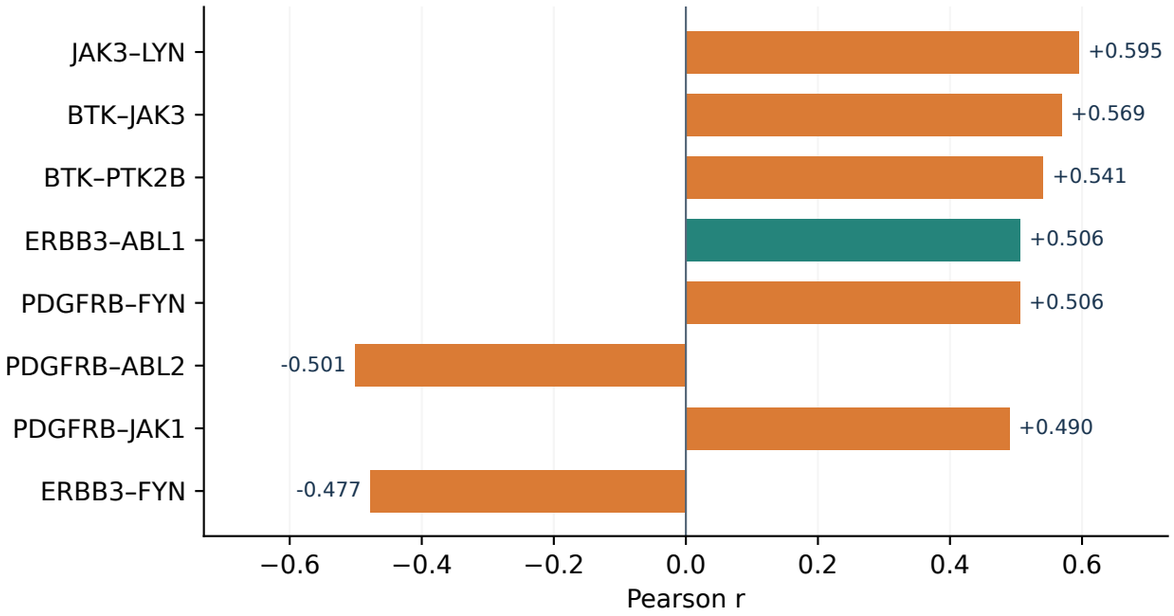
B STRING concordance among significant pairs



C Distribution of observed protein correlations



D Highest |r| associations without a STRING edge



Gray = not significant; blue = STRING-supported; orange = no STRING edge. ERBB3–ABL1: r = 0.506; p = 3.31e-11; BH-FDR = 8.60e-10; rank 4 among unmatched pairs by |r|. Correlation does not estal
